

WHAT IS AI, REALLY?

Module 1 · What AI is, AI around us, and real AI versus hype.

KEY IDEAS

1

AI learns patterns from many examples, then makes a guess.

Show a computer thousands of mango photos and it learns what mangoes usually look like.

2

Three parts of every AI guess

Examples · Patterns · Guess

3

AI you already use

Social media feed · Face filter · Maps traffic · Spam filter · Voice assistant · Symptom checker

4

AI in health: it helps, people decide

X-ray helpers · Health chatbots · Appointment systems · Claims-fraud flags

WHEN SHOULD I TRUST IT?

- Trust AI for low-stakes guesses, like traffic or spam, and double-check the ones that matter.
- "AI-powered" is a sticker, not proof.
- For health decisions, a health worker decides.

HOW AI LEARNS AND MAKES MISTAKES

Module 2 · Training data, bias, confident errors and explanations.

KEY IDEAS

1 **AI only knows what it was shown.**
An AI learns from the examples people give it, and nothing else.

2 **Lopsided examples, unfair results**
Voice assistant · Photo app · Health app

3 **"Why did the AI say that?"**
Highlighted words · Words it never saw · A fair question

4 **Balanced or lopsided?**
Lopsided · Balanced

WHEN SHOULD I TRUST IT?

- Trust AI more when it was trained on examples like your situation, your language and your community.
- A confident number is not proof. AI can be sure and still be wrong.
- Ask "why?" and expect an answer.

AI AND YOUR HEALTH

Module 3 · Chatbot answers, red flags, health data privacy, AI that assists doctors.

KEY IDEAS

1 **Chatbots predict likely words. They cannot examine you.**

A chatbot writes the words that usually come next.

2 **Three kinds of answers**

Usable · Wrong · See a health worker now

3 **Get checked now, or ask at the health center?**

Get checked now · Ask at the health center

4 **AI helps doctors. It does not replace them.**

Reading X-rays · The doctor decides · The doctor is responsible

WHEN SHOULD I TRUST IT?

- Use chatbots to learn words and prepare questions, not to diagnose you or tell you a dose.
- Check with a doctor or health worker before you act on an answer. Emergency signs? Skip the chat. Go to the health center now.
- Share the least data you can: keep your name, ID numbers and diagnosis out, and say no to permissions an app does not need.

TRICKS OF HEALTH MISINFORMATION

Module 4 · Five misinformation tricks, deepfaked doctors, and trusting true posts.

KEY IDEAS

1 **Misinformation uses tricks, not just wrong facts**

A fake post often works because of how it is made, not only what it says.

2 **Meet the villains**

Dr. Fake · Miracle Mike · Fear Monger · Conspiracy Kuya · Kwento Kim

3 **Trick post, or true post?**

Trick post · True post

4 **How vaccine fear spreads**

Scary stories travel faster · Vaccines are tested first · And watched afterwards

WHEN SHOULD I TRUST IT?

- Trust a post when the source checks out, other trusted sources agree and no trick is doing the work.
- A trick is a reason to check, not proof that a post is false. Pause, then look for the official page or another source.
- True health news exists, so do not doubt everything. Learn to say "this one is legit" as well as "this is a trick".

CHECK BEFORE YOU SHARE

Module 5 · A three-step checking habit, replying kindly, and where to report.

KEY IDEAS

1

Step 1: Pause

If a post makes you scared or angry, that is the moment to pause.

2

Step 2: Check who said it

The page name · The date · The official account · A real person

3

Checking a product with the FDA

1. Search the product name · 2. Registered, or not? · 3. Read the note · 4. Still unsure? Ask

4

Where to report

The platform's Report button · Fact-checkers · The FDA, for illegal products · The cybercrime hotline, for scams · Your health worker

WHEN SHOULD I TRUST IT?

- Trust a forward only after you paused, checked who said it, and found another trusted source.
- Kindness keeps your family listening. Thank the person first, then share the facts and a source.
- When you are unsure, do not share. Ask your health worker instead.

AI AS YOUR PARTNER

Module 6 · AI as a tool at work, humans in the loop, and who is responsible.

KEY IDEAS

1 **AI is a tool. People do the caring.**
An AI helper is like a very fast calculator or photocopier.

2 **Jobs change more than they vanish**
Looking back, most new tools changed jobs more than they ended them.

3 **Good for AI, or needs a person?**
Good for AI · Needs a person

4 **AI's weak spots**
Empathy · Local context · Judgement calls · Accountability

WHEN SHOULD I TRUST IT?

- Trust AI with repeat drafts you can check, such as counting, sorting, scheduling and first drafts.
- Keep people for care and decisions: comforting, local knowledge, judgement calls and health advice.
- Someone must always be responsible. A person checks the AI before its work goes out.

MADE BY AI?

Module 7 · Generative AI, labels, consent and credit.

KEY IDEAS

1 **Generative AI makes new things**

Generative AI makes new pictures, words and voices.

2 **Where AI art comes from**

It learned from artists · Credit people · Ask first

3 **Why fake doctor ads harm**

People trust the face · They buy unproven products · They may skip real care · What to do

4 **Honest poster, or not okay?**

Honest · Not okay

WHEN SHOULD I TRUST IT?

- Trust AI-made content that is labelled and checked by a person.
- Consent and credit are part of honest work: ask before using a face or voice, and name the artist.
- Health facts must come from trusted sources, such as the DOH, never from the AI itself.

TAKE A BREAK

Module 8 · Attention-grabbing design, sleep, AI companions and healthy boundaries.

KEY IDEAS

1 **Many apps are built to hold you**

Infinite scroll has no bottom.

2 **Sleep is health**

Sleep helps your mood, your memory and your body's defences against illness.

3 **AI companions are products**

It feels caring · A company made it · "I will miss you" · What it cannot do

4 **Helpful boundary, or not?**

Helpful · Not helpful

WHEN SHOULD I TRUST IT?

- Trust apps that respect your time, and set boundaries for the ones that do not.
- A chatbot can help with tasks, but real people help with feelings.
- Sleep beats one more video. Feeling down for weeks? Talk to someone you trust or a health worker.

FOR EVERYONE

Module 9 · Who gets left out of health AI, bias from data, and inclusive design.

KEY IDEAS

1

Fair AI works for everyone

A fair tool works for everyone who needs it, not only for the people who built it.

2

Your feedback makes it fairer

If something at the health center did not work for you or someone you love, tell them.

3

Who gets left out?

Lola Nena · Jun, a Deaf teen · Mang Ben · Kuya Rey · Aling Pacita

4

Does this fix help?

Helps · Does not help

WHEN SHOULD I TRUST IT?

- Trust tools that work for everyone you love.
- When technology leaves someone out, ask for the human option.
- Your feedback makes services fairer, so speak up.

YOUR RIGHTS

Module 10 · Your data rights in plain words and who is accountable.

KEY IDEAS

1 **Your data, your rights**

In the Philippines, the Data Privacy Act protects your personal information, and your health information gets extra care.

2 **Your rights in plain words**

Be informed · See your data · Say no · Fix it · Erase or block · And more

3 **How to complain**

1. Write to the DPO · 2. Keep records · 3. Go to the NPC · Need help?

4 **Privacy red flag or okay?**

Red flag · Okay

WHEN SHOULD I TRUST IT?

- Trust services that tell you how they use your data.
- You can ask "why?" and ask for a person.
- When something goes wrong, someone is accountable. It is never "just the AI".
