

HOW TO RUN AN ARAW SESSION

A short guide for facilitators: teachers, health workers and community leaders.

Scan the code to open ARAW on your phone.

Before the session

- Read the module page for the day. Play the lesson once yourself.
- Pick a quiet, well-lit place and charge the phones.
- Print the pages you need from this kit.
- Know your nearest health center, so you can point people to it.

What you need

- This print kit: this guide, the module posters and the cards.
- Phones with ARAW open, or one projector for the whole group.
- Pens and paper for the paper activities.

The 45-minute flow

5 min	15 min	15 min	10 min
Hook	Key ideas	Activity	Discuss and takeaway

Hook	Read the story line aloud. Ask: what would you do?
Key ideas	Go through the lesson cards together, one idea at a time.
Activity	Play the module game, or use the paper activity.
Discuss and takeaway	Talk through the prompts, then read the takeaway aloud.

The core idea: calibrated trust

ARAW does not say "trust nothing". It helps people trust the right things, by the right amount.

End every session with the same question:

WHEN SHOULD I TRUST IT?

KEEP EVERYONE SAFE

Kindness and health safety come first.

Kindness rules

- Nobody is shamed or blamed. People share myths because they care.
- Mock the trick, never the person.
- Talk with people, not down to them. Use plain words and go slowly.
- Show what good sources look like, not only what to avoid.
- Every answer is welcome. Some prompts have no single right answer.

Health safety rule

- Never give doses, diagnoses or treatment advice.
- Always point to people: a health worker, the barangay health center or a doctor.
- If anyone describes chest pain, trouble breathing, stroke signs, a seizure or heavy bleeding, tell them to go to a health facility now. Do not wait for the session to end.
- The red-flag card in this kit lists the signs. Keep it on the table.

Each module page

- Learning goals, the story hook and the key ideas for the lesson.
- Discussion prompts taken from the lesson, and the activity: the game in the app, or a paper activity.
- The takeaway to read aloud, and a timing strip for 45 minutes.

WHAT IS AI, REALLY?

Module 1

What AI is, AI around us, and real AI versus hype.

You will learn to

- Describe AI as learning patterns from many examples to make guesses.
- Spot the AI you already use every day.
- Tell real AI from "AI-powered" hype.

Story hook

Lola Nena's kitchen

"Is my phone listening to me? It keeps showing me tea ads!"

Lola Nena

Key ideas

- AI learns patterns from many examples, then makes a guess.
- Three parts of every AI guess
- AI you already use
- AI in health: it helps, people decide

Discussion prompts

1. Where did you meet AI this week?
2. A computer saw 1,000 mango photos. What did it learn?
3. Your maps app says "20 minutes". Is that a promise or a guess?

Activity

In the app

AI or Not?

On paper

Each person names one thing they use every day. The group votes: AI or not?

When should I trust it?

- Trust AI for low-stakes guesses, like traffic or spam, and double-check the ones that matter.
- "AI-powered" is a sticker, not proof.
- For health decisions, a health worker decides.

5 min	15 min	15 min	10 min
Hook	Key ideas	Activity	Discuss and takeaway

HOW AI LEARNS AND MAKES MISTAKES

Module 2

Training data, bias, confident errors and explanations.

You will learn to

- Explain that AI learns only from the examples it is given.
- Recognise that lopsided examples make biased AI.
- Know that AI can be confidently wrong, and that asking "why?" is fair.

Story hook

Bea's school project

"Let's teach a computer to catch fake health posts!"

Bea

Key ideas

- AI only knows what it was shown.
- Lopsided examples, unfair results
- "Why did the AI say that?"
- Balanced or lopsided?

Discussion prompts

1. Would you trust a detector trained only in English to check posts in your language?
2. A fruit sorter was trained only on green mangoes. Then it sees a ripe yellow mango. What does it say?
3. An AI says "98% sure". Does a high number mean it is right?

Activity

In the app

Turuan si AI

On paper

Give the group a few examples and ask what a learner would guess. Then show lopsided examples and ask what goes wrong.

When should I trust it?

- Trust AI more when it was trained on examples like your situation, your language and your community.
- A confident number is not proof. AI can be sure and still be wrong.
- Ask "why?" and expect an answer.

5 min	15 min	15 min	10 min
Hook	Key ideas	Activity	Discuss and takeaway

AI AND YOUR HEALTH

Module 3

Chatbot answers, red flags, health data privacy, AI that assists doctors.

You will learn to

- Judge whether a chatbot answer is usable, wrong, or a "see a health worker now" case.
- Know the red-flag symptoms that always go to a professional.
- Protect your health data and know that AI assists doctors, it does not replace them.

Story hook

Bea's bedroom, midnight

"I have a fever and a headache. Let me just ask the chatbot."

Bea

Key ideas

- Chatbots predict likely words. They cannot examine you.
- Three kinds of answers
- Get checked now, or ask at the health center?
- AI helps doctors. It does not replace them.

Discussion prompts

1. Bea asks: "Can I take Lola's leftover antibiotics for my cough?" Which chatbot answer is better?
2. What should you NOT type into a chatbot?
3. A step-counter app asks to see your contacts and photos. Allow?

Activity

In the app

Tanong kay Chatbot

On paper

Read the red-flag card aloud. For each flag, the group says: go to a health facility now.

When should I trust it?

- Use chatbots to learn words and prepare questions, not to diagnose you or tell you a dose.
- Check with a doctor or health worker before you act on an answer. Emergency signs? Skip the chat. Go to the health center now.
- Share the least data you can: keep your name, ID numbers and diagnosis out, and say no to permissions an app does not need.

5 min	15 min	15 min	10 min
Hook	Key ideas	Activity	Discuss and takeaway

TRICKS OF HEALTH MISINFORMATION

Module 4

Five misinformation tricks, deepfaked doctors, and trusting true posts.

You will learn to

- Name the five misinformation tricks.
- Spot them in local-style posts, including AI-deepfaked doctor endorsements.
- Rate true posts as true.

Story hook

The family group chat

"Doctor reveals: this tea cures diabetes in 7 days! Share before it's deleted!"

Tita Baby

Key ideas

- Misinformation uses tricks, not just wrong facts
- Meet the villains
- Trick post, or true post?
- How vaccine fear spreads

Discussion prompts

1. A video shows a "doctor" selling a tea that "cures diabetes". What is the best check?
2. "Share before it's deleted!" Which villain is this?
3. "It worked for my neighbour!" Is that enough proof?

Activity

In the app

Spot the Tactic

On paper

Use the five-tricks poster. Read a post aloud and the group names the trick.

When should I trust it?

- Trust a post when the source checks out, other trusted sources agree and no trick is doing the work.
- A trick is a reason to check, not proof that a post is false. Pause, then look for the official page or another source.
- True health news exists, so do not doubt everything. Learn to say "this one is legit" as well as "this is a trick".

5 min	15 min	15 min	10 min
Hook	Key ideas	Activity	Discuss and takeaway

CHECK BEFORE YOU SHARE

Module 5

A three-step checking habit, replying kindly, and where to report.

You will learn to

- Pause, check who said it, and look for another source.
- Reply to family kindly without shaming.
- Know where to report misinformation.

Story hook

The family group chat lights up

"Miracle tea replaces your maintenance meds! 100% natural, no side effects! Please share 🙏🙏🙏"

Tita Baby

Key ideas

- Step 1: Pause
- Step 2: Check who said it
- Checking a product with the FDA
- Where to report

Discussion prompts

1. Step 3 is to look for another source. Which one counts?
2. Tita forwards the tea post to the GC. Which reply helps most?
3. Should you quote-share the fake post to warn everyone?

Activity

In the app

🎮 Tita's GC

On paper

Use the check-before-share card. Practise the three steps, then a kind reply.

When should I trust it?

- Trust a forward only after you paused, checked who said it, and found another trusted source.
- Kindness keeps your family listening. Thank the person first, then share the facts and a source.
- When you are unsure, do not share. Ask your health worker instead.

5 min	15 min	15 min	10 min
Hook	Key ideas	Activity	Discuss and takeaway

AI AS YOUR PARTNER

Module 6

AI as a tool at work, humans in the loop, and who is responsible.

You will learn to

- Name tasks AI does well and tasks that need people.
- Explain "human in the loop".
- Say who is responsible when AI is used at work.

Story hook

The barangay health center, Monday morning

"So much paperwork, Ara! The barangay just gave us a new AI helper. Can it do my whole job?"

Kuya Jun

Key ideas

- AI is a tool. People do the caring.
- Jobs change more than they vanish
- Good for AI, or needs a person?
- AI's weak spots

Discussion prompts

1. Which task would you hand to AI first?
2. The AI translates a health leaflet into Hiligaynon. Who checks it?
3. The AI helper made a wrong schedule, and two home visits were missed. Who is responsible?

Activity

In the app

Hati Tayo!

On paper

List tasks at work. The group sorts them: AI can help, or a person must decide.

When should I trust it?

- Trust AI with repeat drafts you can check, such as counting, sorting, scheduling and first drafts.
- Keep people for care and decisions: comforting, local knowledge, judgement calls and health advice.
- Someone must always be responsible. A person checks the AI before its work goes out.

5 min	15 min	15 min	10 min
Hook	Key ideas	Activity	Discuss and takeaway

MADE BY AI?

Module 7

Generative AI, labels, consent and credit.

You will learn to

- Explain that generative AI makes new content from patterns.
- Label AI-made content, ask consent and credit artists.
- Explain why deepfaked doctor ads cause harm.

Story hook

Bea's room, the night before the barangay health drive

"I have to make the poster for the health drive, Ara! This AI tool makes pictures in seconds. Is it okay to just use them?"

Bea

Key ideas

- Generative AI makes new things
- Where AI art comes from
- Why fake doctor ads harm
- Honest poster, or not okay?

Discussion prompts

1. Would you trust a poster more if it said "Made with AI"?
2. Bea made the poster picture with AI. Should the poster say "Made with AI"?
3. Bea likes a photo of her neighbour Mang Rey at the health center. Can she use it on the poster without asking?

Activity

In the app

Gawa Ko 'To!

On paper

Describe a picture or video. The group says: made by AI? What label should it have?

When should I trust it?

- Trust AI-made content that is labelled and checked by a person.
- Consent and credit are part of honest work: ask before using a face or voice, and name the artist.
- Health facts must come from trusted sources, such as the DOH, never from the AI itself.

5 min	15 min	15 min	10 min
Hook	Key ideas	Activity	Discuss and takeaway

TAKE A BREAK

Module 8

Attention-grabbing design, sleep, AI companions and healthy boundaries.

You will learn to

- Name the design tricks that keep people scrolling.
- Explain why sleep matters and see AI companions as products, not friends.
- Set simple boundaries and know when to talk to a real person.

Story hook

Bea's room, 1 AM

"Bea, dear, it is one in the morning and there is still light under your door. What are you watching?"

Lola Nena

Key ideas

- Many apps are built to hold you
- Sleep is health
- AI companions are products
- Helpful boundary, or not?

Discussion prompts

1. Which boundary will you try this week?
2. Bea has felt down and tired for weeks and nothing seems fun. What is the best thing to do?
3. What is a healthy way to use a chatbot?

Activity

In the app

Tulog na, Bea!

On paper

Each person shares one habit that keeps them scrolling and one simple boundary.

When should I trust it?

- Trust apps that respect your time, and set boundaries for the ones that do not.
- A chatbot can help with tasks, but real people help with feelings.
- Sleep beats one more video. Feeling down for weeks? Talk to someone you trust or a health worker.

5 min	15 min	15 min	10 min
Hook	Key ideas	Activity	Discuss and takeaway

FOR EVERYONE

Module 9

Who gets left out of health AI, bias from data, and inclusive design.

You will learn to

- Name the groups often left out by health tech.
- Explain that biased data makes unfair AI and suggest fixes.
- Insist on a human option.

Story hook

The barangay health center

"The health center has a new AI kiosk, dear. But the words are so tiny, I cannot read a thing. Where do I press?"

Lola Nena

Key ideas

- Fair AI works for everyone
- Your feedback makes it fairer
- Who gets left out?
- Does this fix help?

Discussion prompts

1. Who in your family would struggle with a kiosk like this?
2. The kiosk's voice was trained on only one accent. Mang Ben, an Ilocano-speaking farmer, talks to it. What happens?
3. The health center wants to remove the front-desk staff because the kiosk is cheaper. What do you say?

Activity

In the app

Sa Sapatos Nila

On paper

Name who could be left out of a health app. The group suggests one fix for each.

When should I trust it?

- Trust tools that work for everyone you love.
- When technology leaves someone out, ask for the human option.
- Your feedback makes services fairer, so speak up.

5 min	15 min	15 min	10 min
Hook	Key ideas	Activity	Discuss and takeaway

YOUR RIGHTS

Module 10

Your data rights in plain words and who is accountable.

You will learn to

- List your data rights in plain words.
- Describe the complaint path, from the organisation to the National Privacy Commission.
- Know that the organisation using AI is responsible, not "the AI".

Story hook

Tita Baby's living room

"My health app sent my lab results to a stranger, dear! Who do I even complain to? Do I have any rights at all?"

Tita Baby

Key ideas

- Your data, your rights
- Your rights in plain words
- How to complain
- Privacy red flag or okay?

Discussion prompts

1. Did you know about these rights before today?
2. An AI system rejected your health insurance claim and the letter does not say why. What can you ask for?
3. A clinic's chatbot gave a patient harmful advice. The clinic says, "It was the AI, not us." Who is responsible?

Activity

In the app

OBJECTION!

On paper

Read the data rights aloud. Practise who to complain to, step by step.

When should I trust it?

- Trust services that tell you how they use your data.
- You can ask "why?" and ask for a person.
- When something goes wrong, someone is accountable. It is never "just the AI".

5 min	15 min	15 min	10 min
Hook	Key ideas	Activity	Discuss and takeaway
